

METHODS, APPARATUSES AND SYSTEMS FACILITATING
DEPLOYMENT, SUPPORT AND CONFIGURATION OF NETWORK ROUTING POLICIES
Abstract of the Disclosure

5 Methods, apparatuses and systems relating to the control and application
of policies for routing data over a computer network, such as the Internet. Some
implementations of the invention facilitate the configuration, deployment
and/or maintenance of network routing policies. Some implementations of the
invention are particularly useful for controlling the routing of data among
10 autonomous systems or organizations. Certain implementations allow for
dynamic modification of routing policy based on such factors as current Internet
performance, load sharing, user-defined parameters, and time of day.
